# Working Prototype Known Problems Report

Product Name : SmartClassPlanner
Team Name : SZCZZ
Date : Jul-23-2018

## List of functions not working properly.

-The website is not able to work on WWW. Solution: it is now able to operate on localhost.
- Database Function not able to deliver due to time constrain. Solution : class info data is stored locally. Not on database.
-May not able to display the entire page properly or completely on IE browser or any browser that is too outdated. Solution : no such problem occurred when using Chrome.
-May not able to display the button shape or image on the webpage on any browser that is too outdated.  Solution : no such problem occurred when using Chrome.
-Having problem display the webpage on smaller devices such as mobile phone browser.
-When a new user opens the webpage in a new environment e.g. new browser / new page, user may need to click on the ' Init data' button to initialize the table.
-When open a new page without clicking the 'init button' first, old data may somehow remain on the page.
-If users input a number that is not an integer, no exception or error message will be prompted.
e.g. input 2.3 will be taken as input 2 but does not make sense.
-Having problem display the table when the webpage first loads. Solution : User need to click on the 'Init data' button first after they load the page.
